## 5 Things to Know When Driving Around a Roundabout

1. Traffic flows counterclockwise around a center island
2. The curved shape of a roundabout necessitates slower speeds
3. Yield to pedestrians in crosswalks upon approach
4. Yield to vehicles already in the roundabout before entering
5. Stay in your lane while in a roundabout

The SR 580/Skinner Boulevard roundabouts are single-lane, one-way slow speed circular intersections designed to reduce crashes and keep traffic flowing smoothly. Traffic moves in a counterclockwise direction and is constantly moving except when yielding to traffic in the roundabout and pedestrians in the crosswalk.
